

## Fortify Your Business Network With Next-Gen Managed Security Solutions

Cyber criminals will steal an estimated total of 33 billion data records annually by 2023.<sup>1</sup> CommQuotes will help you find the best-fit security solutions you need to safeguard your network.

### How Does CommQuotes Help Secure Your Business?

Recent research has shown that the average cost of a cyber attack on any size company is \$200,000,<sup>2</sup> so protecting data is top of mind for many IT leaders. Unfortunately, finding the most effective solutions to strengthen your cyber security posture isn't always straightforward.

If you're struggling to find security solutions that meet your company's needs, the following challenges may sound familiar:

- ✘ You can't meet new compliance requirements because you lack the security products and services needed to obtain a cyber insurance policy.
- ✘ You don't have a strategy to respond to security threats if you were to fall victim to a cyber attack.
- ✘ You've spent a lot of money on penetration testing, but you're still unsure which security solutions will help you build a better defense strategy.
- ✘ You've taken a piecemeal approach to security – putting your organization at risk.
- ✘ You are unsure what steps to take to create a well rounded security posture.
- ✘ You are confused by the seemingly endless security suppliers and products and not sure where to start.

As your vendor-agnostic advocate, CommQuotes will leverage our VIP relationships with dozens of managed security service providers (MSSPs) across the globe to help you find the best-fit, most cost effective solutions to strengthen your security posture.

# Protect Your Network With Managed Security Services

Thanks to our wide-ranging network of MSSP partners, we can position and recommend managed security solutions that deliver everything you need to keep your network safe, acquire or renew cyber insurance, and maintain regulatory compliance – no matter the size of your business.

Consider these expert solutions:

## Managed Detection & Response

Less than 5% of organizations are using managed detection and response (MDR) services today, but that number is estimated to grow to 25% by 2024.<sup>3</sup> MDR services offer 24/7/365 protection by trained security experts who identify malicious activity and contain attacks before they can harm your network. MDR providers offer a wide range of remote response services to allow businesses to rapidly identify and mitigate threats without hiring on-site cyber security staff.

## vCISO

If you don't have the resources to bring on a full-time chief information security officer (CISO), a virtual CISO (vCISO) provides access to top-tier security experts on-demand – without the costs of recruiting and hiring experienced talent. A vCISO can identify and deploy key technologies to plug any security gaps in your network and build effective cyber security policies and procedures to ensure your business stays secure and competitive.

## Endpoint Protection Platform

If your business supports remote and hybrid workers, the number of endpoints within your network needing to be secured has grown. A managed endpoint protection platform (EPP) extends your network's firewall protection to every endpoint in your network – no matter where they're located – by integrating traditional antivirus, or NGAV, and additional features like a personal firewall and data encryption.

## SIEM

Managing the massive amounts of security data and alerts your cyber security system may generate puts a strain on time and resources. SIEM as a service prioritizes security alerts by filtering your data to streamline incident management, meet regulatory compliance requirements, and identify signs of malicious activity before they can harm your network.

## Find the Right Managed Security Solutions at the Lowest Prices With CommQuotes

CommQuotes is your expert security advocate. We take a vendor-agnostic approach to ensure you get the solutions you need to strengthen your security posture. Trust CommQuotes for:

White-glove service and world-class support

Agnostic advice from innovative experts

Right-fit technology to support your growth goals

Long-standing relationships with providers for better-than-direct pricing

If you're not 100% confident your company's security posture is up to snuff, **contact CommQuotes today**. We can identify any vulnerabilities in your systems and leverage our portfolio of trusted managed security providers to source the best-fit solutions for your business. With CommQuotes' help, you'll rest easy knowing your critical business data is protected.
